Holographic Security Stripes

Holographic Security Stripes are well known in everyday life, such as on banknotes or ID-Cards. These Security Stripes can be applied on almost all worldwide existing license plates by means of hot stamping to ensure that the hologram cannot be taken off without destroying.

Enhanced with a wide range of security features such as customized nanotext, the holographic stripe increases the security of the license plate. It can also be personalized for the specific country with a protected design for maximum protection against forging of license plates.

Advantages:

- Highest security against counterfeiting of license plates
- Possible integration of hidden security features, which can only be checked by authorised people
- Easy recognition for genuineness
- Easily visible with the naked eye

Examples of security features, which are available for the Holographic Security Stripe:
