

Tamper Proof Plate

Tamper Proof Plate

The Tamper Proof Plate solution has been developed consisting of a plastic number plate holder (e.g. Clix2) with integrated pin in the middle as adhesive surface and a modified aluminium embossed number plate. After inserting the license plate, which is being produced with a hole, the license plate surface and the pin are stacked so that a holographic validation sticker can be applied.

In case of attempting to remove the license plate, the self-destructing holographic label will be destroyed and the license plate can be easily identified as invalid.

Advantages

- Cost-effective anti-theft solution
- Maintain visual appearance of number plates
- Compliance with ISO Standard ISO 7591
