

Holographic Car Plate Label

Holographic Plate Validation Stickers:

The use of holographic car plate labels provide a secure validation of the car plates and registration details for the finished vehicle license plates. All labels are tamper-evident due to the use of high security holographic originations and self-destructive foils used in the label construction.

The labels are suitable for personalisation by standard desktop thermal transfer printers. The printed information is sealed between the layers of the label construction and cannot be tampered with. Upon removal of the labels from the license plate surface, a visible void pattern will appear which makes the transfer from one license plate to another impossible.

All labels are tested according to applicable ISO and DIN norms for durability and lifetime.

Advantages:

- Suitable for central and decentral printing and issuance
- User personalisation with desktop thermal transfer printers
- Self-destructive upon removal
- Suitable for reflective, acrylic, PET and painted license plate surfaces
- Guaranteed for maximum security and durability
- Customised designs upon request
