

Hot Stamping Foils

Hot Stamping Foils with holographic inscription

Hot stamping foils with holographic inscription offer medium or high security features, which protect the license plate against illegal copying. The holographic inscription cannot be copied by inks, and access to these security foils is restricted to authorized entities.

There is a choice between a standard inscription and a personalized and country specific inscription. The effects are visible at different viewing angles, where the inscription e.g. turns into shiny colourful element, which can be verified either in daylight or at night-time. The metallization layer of these Hot Stamping Foils is made of chrome. Therefore, license plates with these foils are very durable and fulfil all relevant DIN and ISO specifications.

Hot Stamping Foils with holographic inscription provide a higher security level and license plate protection, and do not affect the legibility of the license plate, speed cameras can easily recognize the license plate.

All effects are visible even under poor light conditions.

Advantages:

- Increase of security against forging of license plates
- Robust and high quality product
- Fulfills ISO and DIN specifications for license plates
- Easy recognition by speed cameras
- Restricted for authorized entities
- Individual country-specific inscription on demand
