

Holographic Security Stripes

Holographic Security Stripes

Holographic Security Stripes are well known in everyday life, such as on banknotes or ID-Cards. These Security Stripes can be applied on almost any of the globally existing license plates by means of hot stamping.

This ensures that the hologram cannot be taken off the plate without destruction.

Enhanced with a wide range of security features such as customised nanotext, the holographic stripe increases the security of the license plate significantly. It can also be personalised for the specific country with a protected design security in regards to the forging of license plates.

Advantages

- | | |
|---|--|
| <ul style="list-style-type: none"> ▪ Highest security against counterfeiting of license plates | <ul style="list-style-type: none"> ▪ Possible integration of hidden security features, which can only be checked by authorised people |
| <ul style="list-style-type: none"> ▪ Easy validation of entitlement | <ul style="list-style-type: none"> ▪ Easily visible with the naked eye |
