

Secure Locks and HoloCaps

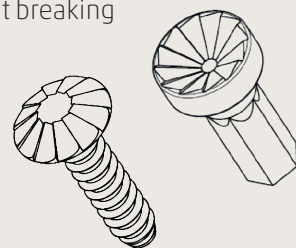

One of the most advanced protection for vehicles license plates

In several countries, license plates are fixed by ordinary screws. Therefore, license plates can easily be removed and fixed to other vehicles as these fixings are no substantial obstacle for criminals. For this reason, Secure Locks with HoloCaps have been developed to prevent fraud attempts and offer customers an additional security feature.

These Secure Locks can only be fitted with a special screwdriver and cannot be reopend without breaking the screw and cap. In addition, the screws are protected with a special tamper-evident plastic seal, which will break in case of removal.

The seal cap contains a hologram, which is customisable and tamper-proof. This security feature is well known from banknotes, passports and other security documents so the security forces can easily confirm the authenticity.

The HoloCap offers one of the most advanced protection and makes any manipulation attempt visible.

Advantages

- Additional security feature
- Counterfeit protection
- Customisable HoloCap
- No inks or labels
